

FULL MASTER PROMPT — PREMIUM BIKE TRAVEL ACCESSORIES E-COMMERCE

Build a complete, modern, premium, production-ready **Bike Travel Accessories E-Commerce Website**.

This is NOT a motorcycle/bike selling website.

The website is an online store for **bike riding, touring, travel, adventure and motorcycle accessories** such as helmets, riding gloves, jackets, saddle bags, tank bags, phone mounts, bike lights, rain gear, bike covers, tools, luggage, touring equipment and other riding essentials.

The website must feel like a **premium motorcycle adventure/travel brand**, not like a basic template, generic shopping website, or simple CRUD application.

The entire application must have excellent UI/UX, responsive design, smooth interactions, proper spacing, accessibility, performance optimization, secure authentication and a professional admin dashboard.

1. TECHNOLOGY STACK

Use the following architecture:

Frontend

- React
- Vite
- TypeScript
- Tailwind CSS
- React Router
- Modern reusable components
- Responsive design
- Dark mode + Light mode

Backend

- ASP.NET Core Web API
- C#
- Entity Framework Core
- ASP.NET Core Identity
- JWT authentication
- RESTful APIs
- DTO architecture

- Service layer
- Repository pattern where appropriate
- Proper validation
- Global exception handling
- Logging

Database

- SQL Server

Payment

- Razorpay

Image Storage

Use a proper image/object storage solution rather than storing large image files directly inside SQL Server.

Architecture

Frontend ↓ ASP.NET Core Web API ↓ Service Layer ↓ Entity Framework Core ↓ SQL Server

Payment: ASP.NET Core API ↔ Razorpay

Images: Frontend → API → Image Storage

2. BRAND / DESIGN DIRECTION

Create a premium visual identity around:

- Motorcycle touring
- Adventure
- Freedom
- Long-distance riding
- Road trips
- Outdoor exploration
- Premium riding gear

The design should feel:

- Premium
- Modern
- Bold
- Minimal

- Professional
- Automotive
- Adventure-focused
- Trustworthy

Do NOT make it look like:

- Generic Bootstrap website
- Basic Amazon clone
- Cheap marketplace
- Old-fashioned e-commerce
- Overloaded UI

Use:

- Large product photography
- Strong typography
- Clean cards
- Proper whitespace
- Subtle borders
- Premium dark sections
- Smooth hover effects
- Micro-interactions
- Modern buttons
- Clean icons
- Proper visual hierarchy

3. COLOR SYSTEM

Create a complete design system.

Support:

Light Mode

- White background
- Soft gray sections
- Dark typography
- Clean cards
- Subtle borders
- Premium accent color

Dark Mode

- Deep charcoal/black background

- Dark elevated cards
- White/light typography
- Subtle borders
- Premium accent color
- High contrast

The dark mode must NOT simply invert the light theme.

Both themes should be intentionally designed.

Add a theme toggle:

Light → Dark → System

Persist theme preference using local storage.

4. GLOBAL HEADER

Create a premium responsive header.

Desktop:

Logo Home Shop Categories New Arrivals Best Sellers Offers Compare Search Wishlist Cart Account Theme Toggle

Mobile:

Menu Logo Search Cart

Use sticky/floating header behavior where appropriate.

Header should remain clean and uncluttered.

5. HOME PAGE

Create a premium homepage.

Hero Section

Use a large motorcycle touring/adventure lifestyle image.

Headline:

"RIDE. EXPLORE. REPEAT."

Supporting text:

"Premium gear and accessories built for every journey."

Buttons:

[SHOP NOW]

[EXPLORE GEAR]

Include subtle animation.

Hero should feel like a premium motorcycle brand.

6. CATEGORY SECTION

Create visually attractive category cards.

Categories:

- Helmets
- Riding Gloves
- Riding Jackets
- Riding Pants
- Riding Boots
- Saddle Bags
- Tank Bags
- Tail Bags
- Backpacks
- Phone Mounts
- Bike Lights
- Rain Gear
- Bike Covers
- Tools
- Touring Accessories

Each category should have:

- Image
- Name
- Short description
- Product count
- Hover effect

7. FEATURED PRODUCTS

Display premium product cards.

Each product card should include:

- Product image
- Wishlist icon
- Discount badge
- Product name
- Brand
- Rating
- Review count
- MRP
- Selling price
- Discount percentage
- Stock status
- Add to Cart button
- Quick View
- Compare option

Example:

Adventure Waterproof Saddle Bag

★★★★★ 4.8

₹2,499 ₹3,499

29% OFF

✓ In Stock

[Add to Cart]

8. NEW ARRIVALS

Create a dedicated section for newly added products.

Display:

- New badge

- Product image
- Product name
- Price
- Rating
- Add to cart

Admin should be able to control whether a product appears in New Arrivals.

9. BEST SELLERS

Create a Best Sellers section.

Determine best sellers based on actual order/product sales data.

Do NOT hard-code best sellers.

10. TRAVEL COLLECTIONS

Create collections based on riding situations.

Examples:

Weekend Ride

Products useful for short trips.

Long Distance Touring

- Saddle bags
- Tank bags
- Riding jackets
- Gloves
- Phone mounts
- Rain gear
- Tool kits

Adventure Essentials

Monsoon Ready

Daily Commute

Off-Road Gear

Each collection should have:

- Banner image
 - Title
 - Description
 - Product list
 - Shop collection button
-

11. WHY CHOOSE US

Create a trust section.

Examples:

- Secure Payments
- Quality Products
- Fast Delivery
- Easy Returns
- Verified Products
- Rider Support

Use clean icons and short descriptions.

12. CUSTOMER REVIEWS

Display real product reviews from database.

Show:

★★★★★ "Excellent quality and perfect for long rides."

Customer name Verified Purchase

Allow:

- Rating
- Review
- Product association
- Verified purchase badge

Admin can moderate reviews.

13. NEWSLETTER

Create newsletter subscription.

Fields:

Email

Button:

"SUBSCRIBE"

Store subscriber email in database.

Prevent duplicate subscriptions.

14. FOOTER

Footer sections:

Shop

- All Products
- New Arrivals
- Best Sellers
- Offers

Categories

- Helmets
- Bags
- Gloves
- Jackets

- Accessories

Customer Support

- Contact Us
- FAQ
- Shipping
- Returns
- Track Order

Account

- Login
- My Orders
- Wishlist
- Profile

Company

- About Us
- Privacy Policy
- Terms
- Refund Policy

Include:

- Social links
- Payment icons
- Copyright
- Contact information

15. SHOP / PRODUCT LISTING PAGE

Create a professional e-commerce listing page.

Top:

Shop All Accessories

Search bar

Product count

Sort dropdown

Filters

Sort options:

- Featured
 - Newest
 - Price Low to High
 - Price High to Low
 - Best Rated
 - Best Selling
-

16. FILTER SYSTEM

Filters:

Category

- Helmets
- Gloves
- Jackets
- Bags
- Accessories
- Tools
- Rain Gear

Brand

Price

- Under ₹1,000
- ₹1,000–₹3,000
- ₹3,000–₹5,000
- ₹5,000+

Also support custom price range.

Rating

Availability

- In Stock
- Out of Stock

Features

- Waterproof
- Reflective
- Lightweight
- Universal Fit

Size

Color

Compatibility

Filters should work dynamically.

On mobile, show a filter drawer.

17. PRODUCT SEARCH

Implement proper search.

Search should support:

- Product name
- SKU
- Brand
- Category
- Model
- Keywords

Include autocomplete suggestions.

Example:

Searching:

"waterproof"

should show relevant waterproof products.

Show:

- Search suggestions
- Product thumbnails

- Product names
 - Prices
 - View all results
-

18. PRODUCT DETAILS PAGE

This must be one of the best-designed pages.

Left:

Large image gallery.

Support:

- Multiple images
- Thumbnail navigation
- Zoom
- Fullscreen
- Image carousel

Right:

Product name

Brand

Rating

Review count

Price

MRP

Discount

Stock status

Quantity selector

[ADD TO CART]

[BUY NOW]

[ADD TO WISHLIST]

[COMPARE]

19. PRODUCT INFORMATION

Below product section:

Tabs/accordions:

- Description
- Features
- Specifications
- Material
- Dimensions
- Weight
- Capacity
- Compatibility
- Warranty
- What's Included
- Shipping Information
- Return Information

20. PRODUCT VARIANTS

Support variants such as:

Size: S M L XL XXL

Color: Black Red Grey

Capacity: 10L 20L 30L

Each variant can have:

- SKU
 - Price
 - Stock
 - Image
-

21. PRODUCT REVIEWS

Product details page should display:

Average rating

Rating breakdown:

5 ★  4 ★  3 ★ 2 ★ 1 ★

Customer reviews

Verified Purchase badge

Allow eligible customers to submit reviews.

22. QUESTIONS & ANSWERS

Allow customers to ask questions about products.

Example:

"Is this saddle bag waterproof?"

Admin can answer.

Display:

Question Answer Date

23. FREQUENTLY BOUGHT TOGETHER

Example:

Saddle Bag

+ Rain Cover

+ Bungee Straps

Show:

Combined price

Discount

[ADD ALL TO CART]

24. RELATED PRODUCTS

Display related products based on:

- Category
- Brand
- Product type
- Tags
- Purchase behavior where available

Do not hard-code related products.

25. WISHLIST

Customer can add/remove products.

Wishlist page:

Product image Product name Price Stock status Remove Add to Cart

Persist wishlist in database for logged-in customers.

26. PRODUCT COMPARE

Allow users to compare compatible products.

Maximum 3 or 4 products.

Comparison fields:

- Price
- Rating
- Brand
- Material

- Weight
- Capacity
- Waterproof
- Size
- Compatibility
- Warranty
- Features

Highlight differences.

27. CART

Cart must be fully functional.

Show:

Product Image Variant Price Quantity Subtotal Remove Save for Later

Order summary:

Subtotal Discount Tax Shipping Coupon Discount Grand Total

Coupon input:

[ENTER COUPON]

[APPLY]

Button:

[PROCEED TO CHECKOUT]

28. COUPON SYSTEM

Support:

Fixed discount

Percentage discount

Minimum order amount

Maximum discount

Start date

Expiry date

Usage limit

Per-user usage limit

Active/inactive

Coupon validation must happen on backend.

Never trust discount values from frontend.

29. CHECKOUT

Create a clean multi-step checkout.

Step 1 — Customer Details

- Full Name
- Mobile
- Email

Step 2 — Address

- House / Building
- Street
- Area
- City
- State
- Pincode
- Country

Allow saved addresses.

Step 3 — Delivery

- Standard delivery
- Express delivery where available

Display estimated delivery.

Step 4 — Order Review

Show:

- Products
- Quantity
- Price
- Discount
- Shipping
- Tax
- Total

Step 5 — Payment

Razorpay integration.

Support Razorpay-supported payment methods.

30. RAZORPAY PAYMENT

Implement secure Razorpay integration.

Flow:

Customer checkout ↓ Backend creates order ↓ Razorpay order created ↓ Frontend opens Razorpay checkout ↓ Payment completed ↓ Backend verifies payment signature ↓ Payment status updated ↓ Order confirmed

Never mark an order as paid based only on frontend response.

Verify payment securely on backend.

Handle:

- Success
 - Failed
 - Cancelled
 - Pending
 - Refund
-

31. ORDER SUCCESS

Create a premium confirmation page.

Example:

✓ ORDER CONFIRMED

Order #TRV10245

Adventure Waterproof Saddle Bag Riding Gloves

Total: ₹3,798

Estimated Delivery: 24 September 2026

Buttons:

[TRACK ORDER]

[VIEW ORDER]

32. CUSTOMER ACCOUNT

Customer dashboard.

Display:

Total Orders Wishlist Items Pending Orders Delivered Orders

Recent Orders.

Pages:

- Profile
- Orders
- Order Details
- Track Order
- Wishlist
- Addresses
- Reviews
- Notifications
- Change Password

33. ORDER TRACKING

Order timeline:

Order Placed ↓ Confirmed ↓ Packed ↓ Shipped ↓ Out for Delivery ↓ Delivered

Display date/time for every status.

34. RETURNS & REFUNDS

Create return request functionality.

Customer can:

- Select order
- Select item
- Select reason
- Add comments
- Submit return request

Admin can:

- Approve
 - Reject
 - Process refund
 - Update return status
-

35. ADMIN AUTHENTICATION

Create separate secure admin area.

URL:

/admin

Require admin authentication.

Use role-based authorization.

Roles:

Super Admin Product Manager Order Manager Inventory Manager

Permissions should be configurable.

36. ADMIN DASHBOARD

Create a premium professional dashboard.

Dashboard cards:

Total Revenue Today's Revenue Total Orders Pending Orders Customers Products Low Stock Out of Stock

Charts:

- Revenue over time
- Orders over time
- Sales by category
- Sales by brand
- Top products

Tables:

Recent Orders Top Selling Products Low Stock Products

37. ADMIN PRODUCT MANAGEMENT

Page:

Products

Features:

- Search
- Filter
- Sort
- Pagination
- Bulk actions

Columns:

Image Product Name SKU Category Brand Price Stock Status Created Date Actions

Actions:

38. ADD PRODUCT

Create a professional product form.

Fields:

Product Name SKU Brand Category Subcategory

Short Description Full Description

MRP Selling Price Discount

Tax

Stock Quantity Low Stock Threshold

Weight Dimensions

Material Color Size Capacity

Compatibility

Warranty

Features

Specifications

SEO Title SEO Description SEO Keywords Slug

39. PRODUCT IMAGE MANAGEMENT

Admin must be able to:

- Upload multiple images
- Preview images
- Delete images
- Reorder images
- Set primary image
- Drag and drop

- Replace image

Show upload progress.

Validate:

- File type
- File size
- Image dimensions

Optimize/compress images where appropriate.

40. CATEGORY MANAGEMENT

Admin can:

Create Edit Delete Activate/deactivate

Category fields:

Name Slug Description Image Parent Category SEO title SEO description

Support hierarchical categories.

41. BRAND MANAGEMENT

Admin can:

Add brand Edit brand Delete brand Activate/deactivate

Fields:

Brand name Logo Description Website SEO information

42. INVENTORY MANAGEMENT

Create dedicated inventory page.

Show:

Product SKU Current Stock Reserved Stock Available Stock Low Stock Threshold Status

Statuses:

IN STOCK LOW STOCK OUT OF STOCK

Admin can adjust stock.

Every stock change should create an inventory transaction.

Inventory transaction:

Product Previous Stock Changed Quantity New Stock Reason User Date

43. SALES / ORDER MANAGEMENT

Admin order table:

Order ID Customer Products Amount Payment Order Status Date

Order status:

Pending Confirmed Packed Shipped Out for Delivery Delivered Cancelled Returned Refunded

Admin can update status.

Customer should receive appropriate notification.

44. PAYMENT MANAGEMENT

Admin should be able to see:

Order ID Payment ID Razorpay Order ID Amount Payment Method Payment Status Date

Statuses:

Pending Paid Failed Refunded

45. CUSTOMER MANAGEMENT

Admin can view:

Customer Email Mobile Orders Total Spent Registration Date Status

Customer details:

Order history Wishlist Addresses where appropriate Reviews

Do not expose sensitive information unnecessarily.

46. COUPON MANAGEMENT

Admin page:

Coupon Code Discount Type Discount Value Minimum Order Maximum Discount Start Date Expiry Date
Usage Limit Used Count Status

Actions:

Create Edit Deactivate Delete

47. BANNER MANAGEMENT

Admin should be able to manage homepage banners.

Fields:

Banner image Title Subtitle Button text Button URL Start date End date Display order Active

Support multiple banners.

48. COLLECTION MANAGEMENT

Admin can create collections:

Weekend Ride Long Distance Adventure Monsoon Commute Off Road

Admin can assign products to collections.

49. REVIEW MANAGEMENT

Admin can:

- View reviews
- Approve
- Hide
- Delete
- Mark featured

Display review statistics.

50. CONTACT / SUPPORT

Create:

Contact Us page

Fields:

Name Email Mobile Subject Message

Admin can view support requests.

51. FAQ

Create FAQ page.

Admin should be able to:

Add Edit Delete Reorder Activate/deactivate

FAQ categories:

Orders Payments Shipping Returns Products Warranty

52. NOTIFICATIONS

Customer notifications:

Order confirmed Payment successful Order shipped Out for delivery Delivered Return approved Refund processed

Admin notifications:

New order Low stock Out of stock New customer Return request Support request

53. SEO

Implement proper SEO.

Every product should have:

SEO-friendly URL

Example:

/products/adventure-waterproof-saddle-bag

Meta title Meta description Canonical URL

Category SEO.

Generate:

- sitemap.xml
- robots.txt

Use semantic HTML.

Add structured data/schema markup where appropriate:

- Product
 - Offer
 - Review
 - Breadcrumb
-

54. PERFORMANCE

Optimize:

- Lazy loading
- Image optimization
- Code splitting
- Pagination
- API caching where appropriate
- Database indexing
- Efficient EF Core queries
- Avoid N+1 queries
- Debounced search
- Optimized API responses

Do not load all products at once.

55. RESPONSIVE DESIGN

Must work perfectly on:

- Large desktop
- Desktop
- Laptop
- Tablet
- Mobile

Mobile UI must be intentionally designed.

Do NOT simply shrink desktop UI.

Use:

- Mobile filter drawer
 - Bottom navigation where appropriate
 - Touch-friendly buttons
 - Responsive product grids
 - Mobile-friendly checkout
-

56. ACCESSIBILITY

Implement:

- Semantic HTML
 - Keyboard navigation
 - Focus states
 - Proper labels
 - Alt text
 - Sufficient contrast
 - Accessible buttons
 - Accessible modals
 - Screen reader-friendly structure
-

57. ERROR HANDLING

Create proper UX for:

- 404 page
- 500 error
- API failure
- Payment failure
- Empty cart
- Empty wishlist
- Empty search results
- Product unavailable
- Out of stock
- Invalid coupon
- Session expiration

Never show raw exceptions to users.

58. LOADING STATES

Use:

- Skeleton loaders
- Button loading states
- Image placeholders
- Table loading states
- Dashboard skeletons

Avoid unnecessary spinners everywhere.

59. EMPTY STATES

Create beautiful empty states.

Example:

Wishlist empty:

"Your next adventure starts here."

[EXPLORE GEAR]

Cart empty:

"Your ride is waiting."

[START SHOPPING]

60. TOAST / NOTIFICATION SYSTEM

Use clean toast messages.

Examples:

"Added to cart"

"Removed from wishlist"

"Coupon applied"

"Order placed successfully"

"Product updated"

"Stock updated"

61. SECURITY

Implement:

- JWT authentication
- Password hashing
- Role-based authorization
- API authorization
- Input validation
- SQL injection protection
- Secure payment verification
- Proper CORS
- Rate limiting where appropriate
- Secure secrets management
- No secrets in frontend
- No Razorpay secret exposed to frontend

Never trust:

- Product price from frontend
- Discount from frontend
- Stock from frontend
- Payment status from frontend

All important values must be verified server-side.

62. DATABASE DESIGN

Create normalized SQL Server schema.

Main tables:

Users Roles UserRoles

Brands Categories Products ProductImages ProductVariants ProductSpecifications

Collections CollectionProducts

Cart CartItems

Wishlist WishlistItems

Addresses

Orders OrderItems OrderStatusHistory

Payments PaymentTransactions

Coupons CouponUsages

Reviews ProductQuestions ProductAnswers

Inventory InventoryTransactions

Banners

Notifications

Faqs

SupportTickets

NewsletterSubscribers

63. PRODUCT DATA MODEL

Product should contain:

Id Name Slug SKU BrandId CategoryId Description ShortDescription MRP SellingPrice TaxPercentage
StockQuantity LowStockThreshold Weight Dimensions Material Warranty Compatibility IsFeatured
IsBestSeller IsNewArrival IsActive CreatedAt UpdatedAt

Do not put everything into one huge table if separate normalized tables are more appropriate.

64. ORDER DATA MODEL

Order:

Id OrderNumber UserId ShippingAddressId Subtotal Discount Tax ShippingCharge TotalAmount CouponId
PaymentStatus OrderStatus CreatedAt UpdatedAt

OrderItem:

OrderId ProductId VariantId ProductNameSnapshot SKU Quantity UnitPrice Discount Tax Total

Store product name and price snapshot so historical orders remain accurate even if the product changes later.

65. INVENTORY LOGIC

When order is successfully confirmed:

Decrease available inventory safely.

Prevent overselling.

Use appropriate transaction/concurrency handling.

When order is cancelled/refunded according to business rules:

Restore stock where appropriate.

Inventory must be auditable.

66. ADMIN ANALYTICS

Dashboard calculations should be based on actual database data.

Metrics:

Today's sales Weekly sales Monthly sales Yearly sales Total sales Average order value Orders Customers
Products Top selling products Top categories Top brands Low stock Out of stock

Do not hard-code dashboard numbers.

67. UI COMPONENT SYSTEM

Create reusable components:

Button Input Select Dropdown Modal Drawer Tabs Accordion Card Badge Toast Pagination DataTable
ProductCard ProductGallery PriceDisplay Rating QuantitySelector SearchBar FilterPanel Breadcrumb Navbar
Footer LoadingSkeleton EmptyState ConfirmDialog

Avoid duplicated UI code.

68. ADMIN UI DESIGN

Admin panel should not look like the customer website.

Admin should have:

Sidebar Topbar Breadcrumbs Dashboard cards Charts Tables Forms Filters Search Pagination

Sidebar:

Dashboard Products Categories Brands Collections Inventory Orders Payments Customers Coupons
Reviews Banners FAQs Support Analytics Settings

69. ADMIN PRODUCT FORM UX

Use sections:

1. Basic Information
2. Pricing
3. Inventory
4. Images
5. Variants
6. Specifications
7. Shipping
8. SEO
9. Visibility

Use tabs/accordions where appropriate.

Show validation messages beside fields.

Do not create one giant visually confusing form.

70. SETTINGS

Admin settings:

Store Name Logo Contact Email Phone Address Currency Tax settings Shipping settings Return settings
Payment settings Social links SEO defaults

Never expose payment secret keys in UI unless handled through secure secret configuration.

71. API STRUCTURE

Create REST APIs such as:

`/api/auth /api/products /api/categories /api/brands /api/collections /api/cart /api/wishlist /api/orders /api/payments /api/coupons /api/reviews /api/customers /api/inventory /api/admin/dashboard /api/admin/products /api/admin/orders /api/admin/customers /api/admin/settings`

Use proper HTTP status codes.

Use DTOs instead of exposing EF entities directly.

72. FRONTEND ROUTES

Customer:

`/ /shop /category/:slug /product/:slug /search /compare /wishlist /cart /checkout /order-success /orders /orders/:id /account /account/profile /account/addresses /account/reviews /login /register /forgot-password /contact /faq /about`

Admin:

`/admin/login /admin /admin/products /admin/products/new /admin/products/:id/edit /admin/categories /admin/brands /admin/collections /admin/inventory /admin/orders /admin/orders/:id /admin/payments /admin/customers /admin/coupons /admin/reviews /admin/banners /admin/faqs /admin/support /admin/analytics /admin/settings`

73. FINAL UX REQUIREMENT

Every screen should feel connected.

Use consistent:

- Typography
- Spacing
- Border radius
- Buttons
- Icons
- Shadows
- Cards

- Colors
- Form controls
- Tables
- Status badges

Do not randomly change styles between pages.

74. ANIMATIONS

Use subtle professional animations.

Examples:

- Product card hover
- Image zoom
- Add-to-cart animation
- Page transitions
- Modal transitions
- Drawer transitions
- Button feedback
- Skeleton loading

Avoid excessive animations.

The website should remain fast.

75. PRODUCT PHOTOGRAPHY STYLE

Use premium motorcycle lifestyle/product imagery.

Images should communicate:

- Adventure
- Touring
- Long rides
- Outdoor exploration
- Premium equipment

Avoid unrelated motorcycle showroom imagery.

Remember: the website sells **accessories**, not motorcycles.

76. BRAND EXPERIENCE

The website should communicate:

"Everything you need for your next ride."

The customer journey should feel like:

DISCOVER ↓ EXPLORE ↓ COMPARE ↓ CHOOSE ↓ ADD TO CART ↓ CHECKOUT ↓ RIDE

77. IMPORTANT DEVELOPMENT RULES

Do NOT:

- Create fake functionality
- Hard-code products
- Hard-code sales
- Hard-code inventory
- Hard-code customer data
- Hard-code order status
- Fake Razorpay success
- Store passwords as plain text
- Expose secret keys
- Trust frontend prices
- Trust frontend stock
- Create insecure admin APIs
- Create huge monolithic React components
- Create duplicated code
- Use placeholder UI where real functionality is required

Everything important should be connected to the backend/database.

78. SEED DATA

Create realistic development seed data.

Include:

At least 5 brands.

At least 10 categories.

At least 30 products.

Products should include different:

- Prices
- Brands
- Categories
- Ratings
- Stock quantities
- Discounts
- Variants

Create realistic product descriptions and specifications.

Use placeholder/sample images during development, but structure the system so admin can upload real images.

79. DEMO ADMIN

Create an initial development admin account through secure configuration/seed process.

Do not hard-code credentials into frontend code.

Document how to create/change admin credentials.

80. FINAL QUALITY BAR

The final website should look like a real commercial product that could be launched publicly.

It should NOT look like:

"student project"

"CRUD demo"

"basic React project"

"Bootstrap template"

Instead it should look like a:

Premium Motorcycle Travel & Adventure Accessories Brand.

Prioritize:

1. UI/UX
2. Functionality
3. Security
4. Responsive design
5. Performance
6. Maintainability
7. Scalability
8. Accessibility
9. SEO
10. Production readiness

Build the application systematically.

First establish the design system and application architecture.

Then build:

Home → Shop → Product Details → Cart → Checkout → Payment → Customer Account → Orders → Admin Dashboard → Product Management → Inventory → Orders → Customers → Analytics → Settings

All pages must share the same professional design system.

The final result should be a complete, polished, premium **Bike Travel Accessories E-Commerce Platform** with customer storefront, secure checkout, Razorpay payment integration, customer account, inventory management, sales management, analytics and a powerful admin panel.
